EXAMINER: Ledynh, Bot L.

Dear Examiner:

If any charges or fees must be paid in connection with the following communication, they may be paid out of our Deposit Account No. 50-0545.

PUBLICATION NO.	PUBLICATION DATE	BASIS FOR RELEVANCE
EP 1 158 275 A	11/28/01	The axial position sensor has a computer (9) including an integrated circuit (10) mounted on a plaque of printed circuits (11) overlapping two Hall effect sensors (8A, 8B). The computer may be included in a specific integrated circuit of the ASIC type which also integrates the two Hall effect sensors. The integrated circuit can be directly applied onto two radial projections (7A, 7B). Axial position sensor for a push-rod (1) displaceable between two positions. The sensor includes a magnet fixed to the push-rod and a magnetic flux sensor fixed with respect to the trajectory of the magnet.

The magnet is in the form of a sleeve (4) of radial magnetic material fixed coaxially on the push-rod which is superficially made of a magnetic material. The magnetic flux sensor (5) includes: (a) two rings (6A, 6B) of ferromagnetic material coaxially surrounding, at a radial distance (e) the sleeve (4), both of which are axially separated from each other; the two rings have at their ends two radial projections (7A, 7B); two Hall effect sensors (8A, 8B) are applied to the projections (7A, 7B), and; a computer (9), connected to the Hall effect sensors, is designed to provide an output signal representing the relationship of the difference of the magnetic fluxes to the sum of the fluxes passing through the sensors. This relationship represents the axial position of the push-rod with respect to a rest position; and tube (18) for closing the magnetic circuit.

DE 43 41 810 A1

06/14/95

The sensor device for a cylinder 12 containing a moving piston 11 comprises a permanent magnet 13 or 13a on the piston 11 or on an element connected with the piston, and at least one magnetic field responsive device 15 or 15a, having a preferential direction, arranged on the cylinder 12 and responsive to the approach of the permanent magnet. The permanent magnet 13 or 13a and the at least one device 15 or 15a are so aligned that on mutual passage the magnetic field 14 or 14a of the permanent magnet at spatially consecutive points acts substantially parallel to the preferential direction of the sensor 15 or 15a but in opposite directions and thus causes different sensor reactions, means being provided for the storage of such sensor reactions. Accordingly it is possible not only to ascertain the exact current position of the piston 11 on passing the device 15 or 15a but furthermore information is always available as to whether the piston is to the left or to the right of the field responsive device.

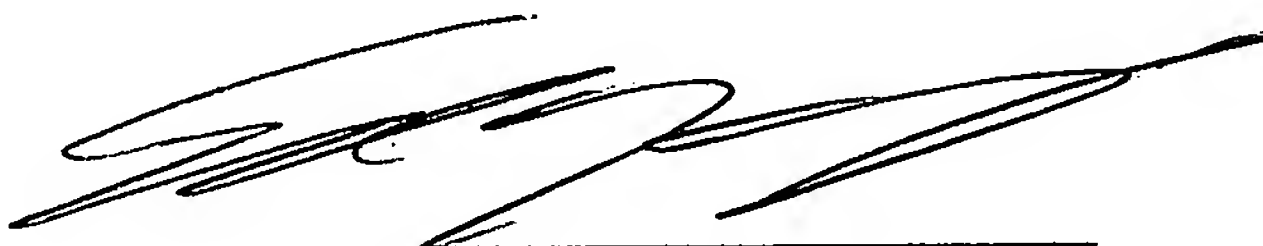

REMARKS

This Information Disclosure Statement ("IDS") is submitted pursuant to 37 CFR § 1.56. The filing of this "information disclosure statement shall not be construed to be an admission that the information cited in the statement is, or is considered to be, material to patentability as defined in § 1.56(b)." See 37 CFR § 1.97(h).

Because the IDS is being provided after the receipt of the first Office Action, Applicants enclose a check in the amount of \$180.00.

Respectfully submitted,

FACTOR & LAKE, LTD.

*EXAMINER: Initial if reference considered, whether or not citation is in conformance with MPEP 609. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant. ¹Applicant's unique citation designation number (optional). ²See Kinds Codes of USPTO Patent Documents at www.uspto.gov or MPEP 901.04. ³Enter Office that issued the document, by the two-letter code (WIPO Standard ST.3). ⁴For Japanese patent documents, the indication of the year of the reign of the Emperor must precede the serial number of the patent document. ⁵Kind of document by the appropriate symbols as indicated on the document under WIPO Standard ST.16 if possible. ⁶Applicant is to place a check mark here if English language Translation is attached.

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 2 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 (1-800-786-9199) and select option 2.
